

Accelerate Your Remote Support Migration to the Cloud

As a BeyondTrust Remote Support customer, you are already using the most comprehensive and secure solution available. For customers with on-premises implementation, migrating to a cloud deployment offers additional benefits that can reduce the resources needed to maintain the solution over time.

Join the ranks of thousands of satisfied customers who entrust their Remote Support implementations to our cloud deployment, hosted on the secure and industry-compliant Amazon Web Services (AWS) cloud.

Migrating to AWS delivers serious benefits

Whether you want to drive digital transformation, reduce IT costs, build innovative applications, or improve support for a global workforce, migrating your workloads to AWS can get you there. Moving to the cloud helps you speed time-to-value and access new markets or buyers worldwide. Plus, with a flexible, consumption-based pricing model, you can enjoy reduced costs, simplified management, and ease of use, while only paying for what you need.

Features and Capabilities

If you currently run your workloads and applications on-premises, you have the opportunity to improve performance and gain business agility by migrating to the cloud. A subscription-based pricing model on AWS with pay-as-you-go licensing allows you to easily scale your application up or down as needed, without worrying about deploying, provisioning, patching, managing, and maintaining on-premises systems. In addition, you can strengthen your security posture with comprehensive, industry-leading security and compliance controls. And after migrating to AWS, you're set up to easily integrate with over 200 native AWS services including artificial intelligence, machine learning, analytics, storage, and more. Migrate your workloads to AWS to unlock new features and focus on innovation.
