

# Eliminate Standing Privileges across Endpoints and the Cloud with Endpoint Privilege Management and Entitle

Always-on access and outdated privilege controls have made it easy for attackers to exploit accounts, especially with AI helping them launch smarter phishing campaigns, extract data faster, and find hidden admin paths.

Static access is the weak link, and it's putting organizations at risk.

Endpoint Privilege Management stops overprivileged access at the endpoint. Entitle eliminates standing privileges everywhere else.

## Key Outcomes

### Eliminate Standing Privileges Across Endpoints and the Cloud

#### Unify Just-in-Time Privilege Management

Entitle and Endpoint Privilege Management can be administered together with the BeyondTrust Pathfinder platform, our integrated console for seamless administrative workflows across your environment.

Create policies that restrict access on every endpoint (whether desktop or server), in your cloud infrastructure, and across your SaaS applications, all while simplifying the user experience around access requests.

#### Leverage Automated Entitlement Discovery & Self Service

When users need access to a resource, just-in-time (JIT) automation enables them to request and be granted the exact privileges they need within a pre-defined timebox. Permissions are automatically revoked, with signed logs verifying the activity performed.

Third-party privilege monitoring discovers unauthorized privilege escalations in SaaS and across the infrastructure, helping identify access pathways and offering an automated solution for greater control and visibility.

#### Audit and Maintain Compliance Seamlessly

Enforce least privilege and capture signed, tamper-proof audit logs for every privileged action. Attribute activity to specific users and validate appropriate access in real time. Automate provisioning and access reviews to reduce manual effort and streamline compliance workflows. Identify anomalies faster, apply provable remediations, and accelerate audit readiness with confidence.

## Client Success Stories

SaaS, TECH, SECURITY

### NoName Security

"I like Entitle because it's one of those tools I can set up and forget about. I never have to go into it and it just works."

- Mike Morrato

CISO and Global Head of IT

FINANCIAL SERVICES

### Billie

"Employees do the maximum using minimum permissions. [Billie] has embraced JIT access as a standard practice and now experiences a notable reduction in standing permissions. The task of reviewing user access has become manageable, thanks to Entitle's system which efficiently supports a modern tech stack on a large scale."

- Billie Employee

SaaS

### Starburst

"We initially considered building an in-house solution, but Entitle's affordability, ease of use, and comprehensive feature set made it the obvious choice. It not only saved us on additional staffing but also seamlessly integrated into our existing systems."

- Shane Dizer

Security Engineering Manager
