A TWO-TIER APPROACH FOR SECURING PRIVILEGED ACCOUNTS AND IDENTITY ACCESS.

The joint solution from BeyondTrust and OneLogin extends access controls and protections across your hybrid environment - from servers, on-premises applications and cloud systems. This means that you can secure your organization from data breaches related to stolen credentials without compromising end-user experience.

The Joint Solution Benefits

- Provides enterprises with comprehensive access and session controls across their IT environments.
- Gives end users secure, controlled pathways to log into tools they need to use every day.
- Simplifies and secures employee access to cloud and on-premises applications via OneLogin's single sign-on web portal.
- Gain access visibility and correlate analytics on login behavior and privileged account activity - eliminating excessive end-user privilege and remediate threats.
- Automatically apply stricter policies when accessing applications as admin users or logging into systems with highly sensitive data.
- Establish secure sessions for privileged admin users to IT/network infrastructure via BeyondTrust, then apply additional protections such as step-up authentication via OneLogin.

Unified Access Management
OneLogin’s IAM platform covers SaaS and on-premises applications, offering single sign-on, adaptive MFA, automated user management and access reporting.

Privileged Access Management
BeyondTrust’s comprehensive PAM platform provides visibility and control over privileged accounts, enabling you to monitor & maintain a secure infrastructure without impacting productivity.

Market Leaders
Recognized as leaders in the PAM Magic Quadrant and the IDaaS Magic Quadrant respectively.
Comprehensive Management of User Identities for Hybrid Enterprise

**Privileged Access Management**
Comprehensive, integrated privileged access management solutions that provide visibility and control over all privileged accounts and users in your environment.

**Enterprise Password Management**
Gain visibility and control over privileged credentials as well as the systems they’re designed to protect.

**Least Privilege Management**
Enforce least privilege on Windows and Mac endpoints without compromising productivity or security.

**Server Privilege Management**
Control administrator/root, reduce risk, and achieve compliance on Windows, Unix/Linux and network devices.

**Secure Authentication**
Enable secure authentication via SAML or RADIUS single sign-on (SSO) and automatically provision/deprovision user access to SaaS and on-prem applications.

**High-Risk Login Detection and Remediation**
OneLogin Adaptive Authentication uses machine learning to determine whether to prompt users for MFA. It uses a broad set of inputs, including networks, devices, geography, and time, to build a user profile to score the risk of new login attempts and determine when to step up authentication.

**Identity Analytics and Reporting**
View identity audit reports and intelligence via standard templates or build your own custom report in seconds.

BeyondTrust is the worldwide leader in Privileged Access Management, offering the most seamless approach to preventing privilege-related breaches. Our extensible platform empowers organizations to easily scale privilege security as threats evolve across endpoint, server, cloud, DevOps, and network device environments. We are trusted by 20,000 customers.
