

Evolve Beyond Access Control: Uncover Hidden Risks with Identity Security Insights

Turn Privileged Access Activity into Actionable Identity Intelligence

You're already using BeyondTrust Privileged Remote Access to securely control how internal users and third parties connect to critical systems. With features like credential injection, session monitoring, and just-in-time access, you're protecting high-value assets and enforcing least privilege across your environment.

But what about the risks you can't see through access controls alone, such as overprovisioned users, dormant accounts, misconfigurations, and toxic combinations of permissions that exist outside of Privileged Remote Access?

Identity Security Insights helps you uncover those risks. It gives you a clear picture of who has access, where, and why across your hybrid infrastructure. Pairing Privileged Remote Access and Identity Security Insights takes you beyond access control, giving you the full picture of identity risk so you can spot risky access and take action before it becomes a problem.

Key Security Outcomes

Find the Gaps in Your Access Strategy

With Identity Security Insights' True Privilege graph, you can uncover hidden risks like excessive permissions, unintended access, and shadow admins across cloud and on-prem systems.

Focus on What Matters Most

Insights helps prioritize the users and systems that pose the highest risk, so you can take targeted steps to reduce exposure.

Drive Smarter Access Decisions

Use Identity Security Insights recommendations to support privilege reduction, guide policy changes in PRA, and validate access needs based on real data.

Get Ahead of Compliance Needs

Easily report on privilege risk, not just session activity. Provide evidence of least privilege enforcement across users and systems.

Build on the Platform You Already Trust

No new infrastructure or major lift required. Insights works with your existing Privileged Remote Access deployment for faster time to value and consistent policy control.

Client Success Story

“ I wholeheartedly endorse Identity Security Insights as a game changer in the identity security space. For organizations like ours, starting with on-prem AD and then moving into a cloud-forward footing, Insights offers visibility that is unparalleled. Insights and all other BeyondTrust tools serve as a shield to protect our digital kingdom, and it has given us confidence in our security footing.”
