

# BeyondTrust Total Privileged Account and Session Management (PASM+)

## See it, centralize it, and secure it with Total PASM+.

Almost every breach comes down to identities and their access. Privileged access traditionally presents the most risk, but increasingly, threat actors are also exploiting hidden and indirect privilege pathways that can allow them to escalate access and move laterally. Modern privileged account and session management (PASM) capabilities are imperative for ensuring proper control, hygiene, and management of privileged identities and their access, as well as for addressing risky escalation pathways.

BeyondTrust's Total PASM+ solution is designed to help organizations reduce their privileged account and access-related risks, while simplifying the achievement of compliance objectives. Benefit from the most complete PASM solution, paired with cross-domain identity visibility and intelligence that puts you back in control.

Prioritize identity-based remediations with risk-scored visibility. Find and onboard service accounts, create secure sessions for people and machines, and manage passwords, accounts, keys, secrets, and more across your cloud, on-premises, and OT environments.

With BeyondTrust Total PASM+, your organization is empowered with a robust defense against unauthorized access, insider misuse, and potential breaches.

## Unlock Powerful PASM+ Outcomes

### Discover and Onboard Privileged Assets

Continuously identify and onboard privileged assets (web, cloud, virtual), privileged user accounts, service accounts, True Privilege™, DevOps secrets, RPA workflows, and SSH keys.

### Mitigate AI Sprawl

Auto-discover and inventory all machine identities, so they can be onboarded or blocked.

### Illuminate Hidden Privilege

Uncover excessive entitlements and dangerous access overlaps that expand your attack surface.

### Automate Credential Management

Vault and rotate privileged credentials (passwords, SSH keys, etc.) and manage DevOps secrets. Eliminate embedded credentials in scripts and code.

### Apply Powerful Session Management

Control and audit every privileged session—whether employee, vendor, on-premises, or remote.

### Satisfy Audit & Compliance Requests

Leverage extensive privileged account, credential, and session analytics to simplify compliance (HIPAA, SOC, etc.) and benchmark tracking. View MITRE ATT&CK and NIST 800-53 dashboards and reports to make risk mitigation actionable and efficient.

## Client Success Stories

### [DXC Technology](#)

“Even in our complex environment, we’ve increased visibility across the organization and can consistently secure accounts, protect assets, and roll out new features.”

### [ivision](#)

“Standardization is the value here. For seamless authentication, session logging, and consistent audit trails across every environment, our answer has been BeyondTrust. Together, we gained a unified security framework that supports our growth without having to sacrifice control.”
