

# BeyondTrust Cloud Security and Governance: Reduce Risk and Simplify Compliance with Seamless, Scalable Protection

## Develop and Deploy in the Cloud, Securely.

As enterprises move to the cloud to boost efficiency and modernize their infrastructure, security challenges intensify. New threat vectors are introduced, while others expand and become more complex. Hard-coded secrets scattered across clouds, lack of visibility and control over credentials, entitlements sprawl, and standing access are some of the most problematic identity-based risks organizations face in the cloud.

Overstretched IT and security teams are struggling to keep pace with the rapid transformation. Organizations require a forward-thinking security and compliance approach—one that seamlessly integrates identity security, access management, and threat detection.

BeyondTrust's Cloud Security and Governance solution simplifies security across even the most complex of multicloud and hybrid environments. With BeyondTrust's unified Pathfinder Platform, you gain crucial, centralized visibility and control over identities, Paths to Privilege™, and privileged credentials and secrets, so you can proactively harden your security posture and respond to threats.

**Achieve more with less friction in your cloud environments with BeyondTrust.**

## Key Security Outcomes

### See and Mitigate Cloud Risk

Continuously discover and inventory identities, assets, credentials, and Paths to Privilege™ across your entire estate, including cloud, SaaS, hybrid, and on-premises environments.

### Reduce Internal Resource Costs

Empower users to do their work, while reducing infrastructure maintenance and overhead burden, by simplifying and automating a just-in-time (JIT) access model, at scale.

### Improve Internal Audit Efficiency

Automate user access reviews and evidence collection for auditing, and enhance permission visibility, oversight, and compliance with robust monitoring.

### Enable Business Expansion with Risk Reduction

Proactively mitigate identity-based risks with continuous threat detection, response, and real-time assessments.

## Client Success Stories

### PREMIER Bankcard

"Another benefit of moving to the cloud is that BeyondTrust will handle updates from now on. Not having to perform updates manually—and not having to schedule downtime for those updates—is a huge benefit."  
-David Lokke, Senior Systems Administrator

### Sourcegraph

"[BeyondTrust] Entitle's scalability, maturity, and ability to audit permissions at a point in time made it a better solution than other competitors Sourcegraph had evaluated. Entitle is able to read resources across all projects and dynamically picks up on new resources added to our systems."  
-Mohammad Alam, Security Engineer

### Ninja Van

"A key component in our selection of BeyondTrust was their willingness to build integrations with Google Workspace and Google Cloud, niche commercial SaaS solutions, along with in-house developed SaaS applications. With BeyondTrust, we could bring together the privileged access for these applications into a single pane of glass and significantly reduce the resourcing required to manage it."  
-Mateen Sayyed, Regional Head of Identity & Access Management
