

Identity Security Risk Assessment

Gain unprecedented visibility into your identity landscape and uncover hidden pathways that could leave your organization vulnerable.

The BeyondTrust Identity Security Risk Assessment provides a **complimentary, no-obligation assessment** that reveals critical and previously undetected insights into your on-premises and cloud identity providers, such as finding accounts with elevated privilege potential. You'll also rapidly gain actionable intelligence to strengthen your security posture and proactively mitigate potential threats by understanding your organization's Paths to Privilege™.

"Within two hours, we had recommendations and detections in our environment that were actionable, and not only that, we saw a significant reduction in false positives."
- Anna Essex, Sr. Security Analyst, Polsinelli

The BeyondTrust Identity Security Insights product can map identities and their privileges across multiple applications, revealing the True Privilege™ of accounts and potential attack pathways. The Identity Security Risk Assessment leverages **read-only connectors** to ingest data from your critical identity sources, such as **on-premises Active Directory, Okta, Ping Identity, and Entra ID**, to provide a comprehensive analysis.

Assessment Benefits

- **Rapid Setup, Instant Insights**
Integrate within hours, get results within a day.
- **Hidden Pathways Uncovered**
Identify previously unknown escalation routes.
- **Actionable Recommendations**
Receive prescriptive advice to improve your security.
- **Holistic Identity Visibility**
Gain a unified view across your identity fabric.
- **Proactive Identity Attack Surface Management**
Constantly monitor for hygiene issues (dormant accounts, missing MFA, etc.) and other risks, and close security gaps.
- **Improved Compliance Posture**
Understand and address potential compliance gaps.

Key Outcomes

Unmatched Visibility

Obtain a holistic understanding of your identity security posture, including hidden paths to privilege that other tools miss.

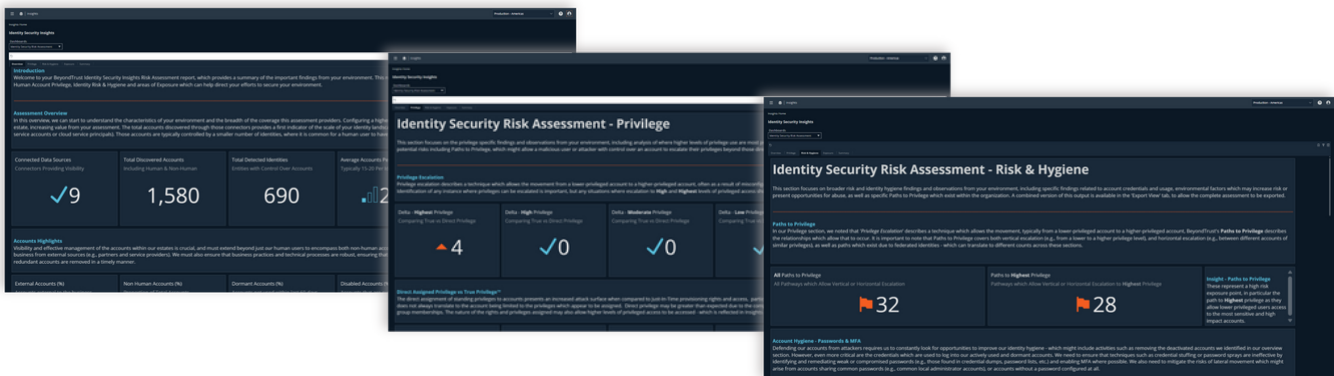

Rapid Risk Reduction

Identify critical identity vulnerabilities, paired with actionable context, enabling you to reduce risk, fast.

Hardened Security Posture

Improve your organization's resilience by uncovering hygiene issues and understanding how attackers could elevate privileges within your environment.
