

Least Privilege Defense-in-Depth from BeyondTrust: Right-Size Access Everywhere

With the number and diversity of enterprise identities, endpoints, cloud services, and SaaS applications continuing to expand, securing elevated access—including privileges and permissions—is more complicated than ever. Many organizations try to “get by” with a collection of fragmented security measures that fail to fully enforce least privilege, leaving dangerous gaps attackers can exploit. Organizations need a broad and streamlined approach to least privilege—one that not only reduces excessive access for everything, but also controls entitlements, application permissions, credential usage, and privileged session activity.

The unified BeyondTrust Pathfinder Platform provides a Least Privilege Defense-in-Depth solution to seamlessly implement just-enough access (JEA) and just-in-time (JIT) enforcement across the entire IT ecosystem. By integrating critical layers of least privilege controls, access governance, application security, and continuous monitoring, organizations can eliminate security gaps and measurably minimize their attack surface—without disrupting operations.

With BeyondTrust, organizations can quickly eliminate standing privileges, proactively block privilege escalation, restrict unwanted lateral movement, and enforce least privilege across every layer. Centralized visibility and automated workflows ensure users receive only the access they need, when they need it—without compromising security.

Implement least privilege at every layer with BeyondTrust.

Key Security Outcomes

Reduced risk

with complete visibility and control over elevated access across identities (human, machine, employee, vendor, etc.), endpoints, cloud environments, and SaaS applications.

Strengthened identity security

by eliminating standing privileges, enforcing JIT access, and granting only the necessary permissions at every level.

Automated least privilege enforcement

with seamless integrations and workflows that enhance security and help admins and end users work better.

Simplified compliance

with centralized privilege management, real-time access visibility, and session monitoring to prevent unauthorized escalation and lateral movement.

Scalable security

that adapts to hybrid infrastructures, remote workforces, and expanding cloud environments.

Client Success Stories

FINANCIAL SERVICES

Investec

“The interactions between BeyondTrust’s products have been brilliantly and carefully orchestrated in a way that we are maximizing our chance of getting as far down the Zero Trust road as we possibly can.”

ENGINEERING, ARCHITECTURE, & CONSULTANCY

Ramboll

“BeyondTrust provides a powerful platform that allows us to streamline and standardize application control and privileged management across our entire organization. Our people are smarter and better protected, and that’s great news for our business.”

TECHNOLOGY

ServiceNow

“We had some pressing customers who wanted higher security standards, and we started to move into more regulated environments, so we needed to tighten our posture particularly around system access and authorization.”
