

Texas Risk and Authorization Management Program Certification

The information below is provided as a companion to the TX-RAMP Certification.

Cloud Service Name

BeyondTrust: Endpoint Privilege Management

Cloud Service Provider URL

<https://www.beyondtrust.com/privilege-management/windows-mac>

Cloud Service Description (200 words or less)

BeyondTrust Privilege Management for Windows & Mac pairs powerful least privilege management and application control capabilities, delivering fast, unmatched risk-reduction potential. Grant the right privilege to the right user or application, only when needed, and create a single audit trail. Operationalize quickly with QuickStart feature and simplified deployment models for fast time-to-value and streamlined compliance.

Highlighted Features

QuickStart Templates – Flexible workstyle templates for Windows and Mac let you immediately eliminate admin rights for everyone, even sysadmins

Trusted Application Protection – Prebuilt templates stop attacks involving trusted apps, catching bad scripts and infected email attachments immediately

Application Control – An automated whitelist and elegant exception handling give you total control over what users can install or run

Security Ecosystem Integrations – Built-in connectors to third-party solutions ensure rapid time to value and return on security investments

Privileged Threat Analytics – Correlate user behavior against asset vulnerability data and security intelligence to assess end-user risk

Enterprise Auditing & Reporting – Provide a single audit trail of all user activity to streamline forensics and simplify compliance
