

Texas Risk and Authorization Management Program Certification

The information below is provided as a companion to the TX-RAMP Certification.

Cloud Service Name

BeyondTrust: Password Safe

Cloud Service Provider URL

<https://www.beyondtrust.com/password-safe>

Cloud Service Description (200 words or less)

BeyondTrust Password Safe combines privileged password and session management to discover, manage, and audit all privileged credential activity. Control privileged user accounts, applications, SSH keys, cloud admin accounts, and more. Enable a searchable audit trail for compliance and forensics and achieve complete control and accountability over privileged accounts.

Highlighted Features

- Automated Discovery – Scan, identify and profile all assets and applications with auto-onboarding of privileged accounts
- Privileged Session Management – Monitor and manage privileged sessions for compliance and forensics
- Secure SSH Key Management – Secure the use of SSH keys for better control, accountability, and security over Unix and Linux systems
- App to App Password Management – Control scripts, files, code and embedded keys to close back doors to your critical systems
- Adaptive Access Control – Evaluate just-in-time context and simplify access requests by considering the day, date, time and location when a user accesses resources to determine their ability to access those systems
- Privileged Threat Analytics – Measure asset characteristics and user behaviors from one day to the next, noting the scope and speed of any changes to alert you to suspicious deviations

Certification Status

Level 2

Texas Risk and Authorization Management Program Certification
