

ARE VENDORS LEAVING YOU VULNERABLE?

The 2016 Vendor Vulnerability Index surveyed more than 600 IT and Security professionals with visibility over the processes associated with enabling external parties to connect to their systems.

External vendors, outsourcers and contractors play a vital and growing role in organizations, but represent a knotty network that organizations struggle to appraise and manage. With all of the recent data breaches, third-party vendors have been identified as a major target for attackers, earning vendor vulnerability a top place on the security gaps list.

DID YOU KNOW?

ON AVERAGE
89 VENDORS
PER WEEK
have access to company networks

FOURTH-PARTY ACCESS:
72% of organizations see vendors using their own sub-contractors as a further risk

believe they will experience
A SERIOUS BREACH
within the next
2 YEARS
due to vendor vulnerabilities

of organizations see their companies becoming increasingly reliant on third parties over the next two years

Vendor access is unavoidable, but it does not have to make your organization vulnerable. Bomgar's Secure Access solutions enable security professionals to control, monitor, and manage access to critical systems by vendors and third-parties without the use of a VPN or other legacy solutions that leave your organization vulnerable to threats.
