

Why Migrate from On-Prem to Cloud with BeyondTrust

Accelerate incident response, gain intelligent recommendations, and streamline workflows to boost productivity and operational efficiencies.

An on-premises approach can mean high costs to scale security infrastructure, and more friction and lag time in updating software with the latest support and features.

BeyondTrust's cloud solutions deliver the most cost-effective value, enabling your organization to improve security, stay up-to-date, and scale, without the hassle of an on-premises environment. Take advantage of our well-orchestrated migration process to the BeyondTrust Pathfinder platform, which provides a unified console for BeyondTrust products. Through Pathfinder, benefit from shared intelligence and other capabilities that enable synergies in risk reduction, operational efficiency, and workforce productivity.

Key Outcomes and Benefits

Faster Time-to-Value

Give time back to IT, security, and the business as a whole so your teams can focus on other initiatives. Simplify the configuration, teardown, and maintenance of resources and save an average 40-200 hours per year.

Ready for Expansion

Seamlessly expand your identity security strategy with the modern BeyondTrust Pathfinder platform. Gain risk visibility combined with proactive security controls, powered by AI/ML.

Eligible with AWS EDP and MACC

Partially or fully fund your BeyondTrust cloud product purchase with AWS or Azure spend commit.

Cloud Success Stories

FINANCIAL FIRM

"Another benefit of moving to the cloud is that BeyondTrust will handle updates from now on. Not having to perform updates manually—and not having to schedule downtime for those updates—is a huge benefit."

—David Lokke, Senior Systems Administrator, Premier Bankcard

IT SERVICES & CONSULTING

"We have been leveraging [Privileged Remote Access] for over 2 years now, and the solution has proved highly available, with no unscheduled outages for the SaaS mode through which this service is delivered. The maintenance timeframes for scheduled updates are short: under 15 minutes. In addition, this update process is seamless."

—Alain Astgen, Service Center Manager & CISO, Axians
