

Just-in-Time Access for Google Cloud Platform & Beyond

Continuously right-size and audit access for Google Cloud Platform (GCP) and multicloud environments

Managing resources, roles, and permissions in Google Cloud can quickly become overwhelming. Manually implementing least privilege access is impractical, and commonly results in human error that causes dangerous security misconfigurations, operational delays, and user productivity impacts. Custom scripts may offer a temporary fix, but they require constant upkeep and aren't designed for scale.

The BeyondTrust Platform streamlines implementation of least privilege access with self-service access requests and automated provisioning through APIs, enabling fine-grained, temporary access in GCP environments.

Organizations use BeyondTrust to secure GCP cloud and cross-cloud access with identity-secure workflows, just-in-time access, and full session monitoring—all from a centralized control panel.

Key Security Outcomes

Reduce Unauthorized Access to GCP

Eliminate over-privileged accounts and unnecessary standing privileges across all GCP resources, roles, and permissions—from BigQuery read-only roles to GKE admin. Continuously apply identity-based authentication and authorization, along with RBAC, to ensure users have only the access they need.

Eliminate Manual Overhead When Managing Permissions

Cut up to 91% of unnecessary access across production environments, customer data, and privileged roles, while reducing countless hours spent manually provisioning and deprovisioning access.

Simplify Cloud Auditing Compliance

Spend less time pulling reports and worrying about inconsistent or incomplete data on your access sessions. BeyondTrust cloud PAM and identity security solutions monitor and log all attended and unattended access sessions—even to ephemeral endpoints. Get full usage metadata, and generate audit-ready reports in just one click.

To learn more or request a demo, visit www.beyondtrust.com or contact our sales team at sales@beyondtrust.com.

Our experts will guide you through the set-up process and help you get the most out of our solution.

See why BeyondTrust is the preferred choice of 75% of the Fortune 100, maintaining a 95% retention rate with a 95% CSAT score.

Client Success Story

TECHNOLOGY/ SOFTWARE

Sourcegraph

Sourcegraph, a global power user of Google Cloud, achieved a 25x increase in the speed of access granting for developers using Entitle. They enforce strict least privilege policies without hindering productivity and maintain complete audit trails of access requests, approvals, and justifications.
